## Fire Services

**Pull the Plug on Electrical Fires**

**Electrical equipment** is a leading cause of home fires in Ontario.

**How do I keep myself and my loved ones safe?**

- Avoid running cords under rugs which can damage the cord and cause a fire.
- Avoid overloading a circuit with "octopus outlets". If additional outlets or circuits are required, have them installed by a licensed electrician.
- Extension cords should be used only as a temporary connection. If permanent wiring is required, have additional outlets installed by a licensed electrician. **Extension cords should not be linked together**—use an extension cord that is long enough to do the job.
- Air conditioners and other heavy appliances should be plugged **directly into an outlet**.
- Ground fault circuit interrupters (GFCIs)** should be installed in bathrooms, kitchens, and garages. GFCIs shut off an electrical circuit when it becomes a shock hazard.
- Check electrical cords for damage such as fraying or nicks.** A damaged cord can expose wires and result in a potential shock or fire hazard.

Install **smoke and carbon monoxide alarms** on every storey of your home. **Test them every month.**

For more information contact your **local fire department**.

**The Lifeguard has final discretion as to the pass or fail of the swim test. They obtain the ability to conduct a swim test and reduce deep area privileges at their discretion.**
